

SAVE WATER & MONEY WITH THE WATER NEUTRAL POOL PROGRAM

SAVE MONEY & THE ENVIRONMENT

Pool owners should be aware of water conservation strategies in their local community and ensure they are 'responsible water managers'. Take three easy steps to transform your backyard pool into a Water Neutral Pool.

WHAT IS A WATER NEUTRAL POOL?

A Water Neutral Pool includes at least three key water saving features:

1 A water tank for topping up the pool

2 A cover to reduce evaporation, and

3 A backwash minimisation system to prevent unnecessary water loss

WHAT DO I GET ONCE MY POOL IS CERTIFIED?

Aside from the benefits of lower operating costs and contributing to a sustainable future, Water Neutral Pool owners receive a personalised display certificate and free metal plaque that can be affixed to your home's fence to demonstrate your water-wise credentials.

You can also help to offset the water used in your pool by installing shade sails and wind covers to prevent evaporation, regularly checking for leaks, and never over-filling the pool.

WANT TO KNOW MORE?

A pool can either be certified by a SPASA member or be self-assessed. A full list of current SPASA members can be found on our website. Self-assessment forms are available from the website.

BENEFITS OF A CERTIFIED WATER NEUTRAL POOL?

You will pay less for water, maintenance and pool chemicals. At the same time you will reduce your pool's environmental impact, while enjoying the benefits of a pool.

A Water Neutral Pool can save more than 6,000 litres of water every year, which can be used in toilets, laundries and the garden.

An initiative of the Swimming Pool & Spa Association of Victoria and supported by the greater metropolitan water retailers.
